Target Pests
Filbertworm (Cydia latiferaeana), Hickory shuckworm (Cydia caryana).

Rate
Minimum of 20 dispensers per acre (0.87 fl oz or 23.1 g a.i. per application). Do not exceed 150 g a.i. (or 330 dispensers) per acre per year.

Application
Place dispensers on lateral branches in upper third of tree canopy. Apply dispensers uniformly in the treated area.

Timing
Apply prior to filbertworm emergence in the spring. Consult your local pest control advisor or Pacific Biocontrol representative for proper timing or estimated dispenser longevity in your area.

Note
Isomate FBW Ring suppresses mating of target pest. Immigration of mated female moths of this species from adjacent external sources of infestation will reduce the level of control. Manage by:
- Treatment of external sources of infestation with Isomate FBW Ring.
- Treatment of external sources of infestation with an effective insecticide.
- Treatment of pheromone treated orchard with insecticide.

Arenwide application is most effective. Supplementary applications of insecticide are advised when Isomate FBW Ring is used in orchards with high pest populations. All pests must be monitored so that timely intervention with insecticides is possible.
