FIRST AID

If Inhaled:
- Move person to fresh air.
- If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably mouth-to-mouth if possible.
- Contact a poison control center or doctor for treatment advice.

If on Skin or Clothing:
- Remove contaminated clothing.
- Immediately rinse skin for 15-20 minutes using plenty of water.
- Contact a poison control center or doctor for treatment advice.

If in Eyes:
- Immediately hold eyes open, slowly and gently rinse with water for 15-20 minutes.
- If wearing contact lenses, rinse eyes for 5 minutes, remove contact lenses, and continue rinsing.
- Contact a poison control center or doctor for treatment advice.

If Swallowed:
- Do not give anything by mouth to an unconscious person.
- Have person sip a glass of water if able to swallow.
- Do not induce vomiting unless told so by a poison control center or doctor.
- Do not give anything by mouth to an unconscious person.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Do not apply more than 150 g of active ingredient per acre per year.

Method of Application: For almond, walnut, pistachio, pecan, hazelnut, fig, pomegranate, apple, pear, orange, grapefruit, lemon, carrot, date, peach, apricot, plum, loquat and other crops where navel orangeworm is a pest.

Deploy ISOMATE MIST NOW in the spring as soon as the tree canopy is fully leached. Firmly insert ISOMATE MIST NOW into the NOW Mist emitter to activate the unit and dispense the contents of the can. Apply one ISOMATE MIST NOW unit per acre.

Product Placement: Hang an activated ISOMATE MIST NOW unit in the center of the tree canopy with the nozzle pointing downwind and at least three (3) feet from fruits or nuts. Distribute the units in a grid pattern considering topography, prevailing wind direction and historical pest pressure to achieve a rate of one unit per acre.

For optimal results, ISOMATE MIST NOW is best used in large contiguous areas. Minimum suggested acreage size is 40 acres.

Mode of Action and Management: ISOMATE MIST NOW suppresses mating of navel orangeworm. Immigration of mated female moths from adjacent external sources of infestation will reduce the level of control. Manage by one or more of the following: a) Treatment of external sources of infestation with ISOMATE MIST NOW; b) Treatment of external sources of infestation with an effective insecticide; c) Treatment of the pheromone treated orchard with an effective insecticide.

Area-wide application is most effective. Complementary applications of an effective insecticide are advised when ISOMATE MIST NOW is used in orchards with significant pest populations. All pests must be monitored so that timely intervention with effective insecticides is possible.

Consult your local pest control advisor for proper timing in your area.

WARRANTY AND LIMITATIONS OF DAMAGES

The directions for use of this product are believed to be adequate and must be followed carefully. Pacific Biocontrol Corporation warrants that the product complies with the specifications expressed in this label. To the extent consistent with applicable law, Pacific Biocontrol Corporation makes no other warranties, and disclaims all other warranties, expressed or implied, including but not limited to warranties of merchantability and fitness for a particular purpose or otherwise, that extend beyond the statements made on this label. To the extent consistent with applicable law, Pacific Biocontrol Corporation’s liability or default, breach or failure under this label shall be limited to the amount of the purchase price. To the extent consistent with applicable law, Pacific Biocontrol Corporation shall have no liability for damages (special, consequential or incidental) that result from handling, storage and use of this product, which is not in compliance with the label. Use of this product implies all directions of this label have been read carefully. Read all directions carefully.
